YPSILON

SEMI & FULLY AUTOMATIC CROSS CUTTING

SEMI & FULLY AUTOMATIC CROSS CUTTING INSTALLATION FOR HOME TEXTILE.

Transport of the product, dimensioning, correct positioning and stacking are fully automatic. The only manual operation (possibility to be upgraded to automatic) is the cross cutting processed by means of an electric or pneumatic cutter. With the machine **YPSILON** the cross cutting procedure can be successfully completed in a very fast way.

Since 1975 we have increasingly deepened, through a constant and accurate system of research and development, how to get high quality in the process of the cross cutting without compromising efficiency, productivity and flexibility.

And so born **YPSILON**, the latest generation of cross cutting machine, which combines the use of the most advanced technologies with maximum usability.

State of the art in achieving the greatest goal: customer's satisfaction.

EFFICIENCY

The high performance of this machine resides in the rapidity and synchronization of transport and stacking which simplify the cross manual (or automatic) cut, by granting, at the same time, an exceptional efficiency.

RETURN ON INVESTMENT

Even though the machine is extremely compact, it presents the most innovative technologies with the aim of maintaining, in any case, an attractive cost-performance ratio.

RELIABILITY

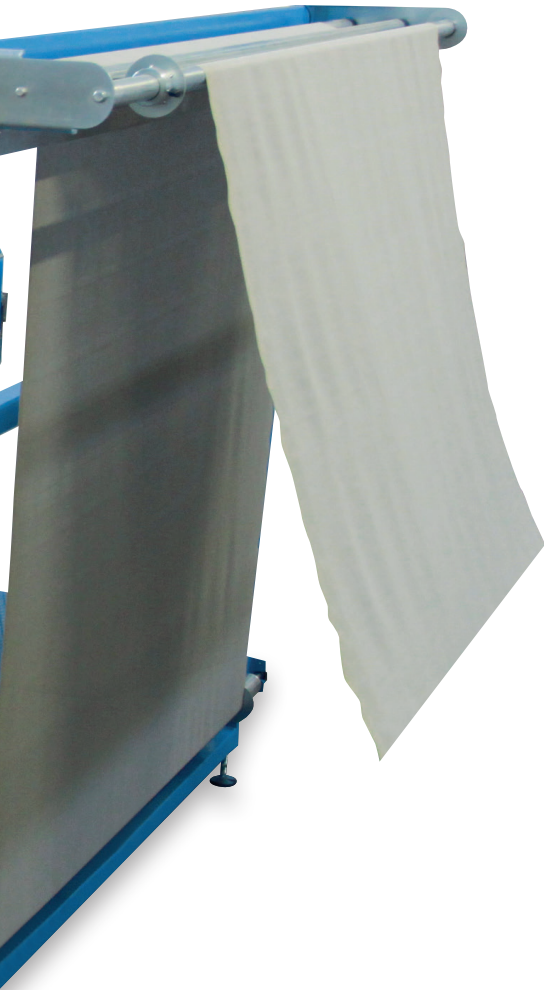

The machine is realized and structured in order to increase and speed up the working process flow, offering a high reliability over a whole working day [24/7].

FLEXIBILITY

The wide range of products that can be processed by means of this installation, allows maintaining a really high level of flexibility and versatility.
